

This page is actually a **Shiprocket-hosted tracking widget** (a functional tool, not an editorial content page) — it just has a search box for Order ID/AWB, powered entirely by Shiprocket's backend. There's no real "content" to rewrite here since it's not copy, it's a widget.

What I think you actually need is the **"Track Order" page copy** for your client's own site — the page that introduces the tracking tool and links/embeds to Shiprocket (or whichever courier partner they use). Here's that:

Track Your Order

Page Title (SEO): Track Your Order | [Website Name]

Meta Description: Track your [Website Name] order in real time. Enter your Order ID or AWB number to get the latest shipping status.

Track Your Order

Want to know where your order is? Enter your **Order ID** or **AWB (tracking) number** below to get real-time updates on your shipment status.

[Order ID] — found in your order confirmation email or SMS

[AWB Number] — found in your shipping confirmation email, once your order is dispatched

[Track My Order →] (*button/embed connects to courier tracking widget*)

Need Help?

If you're unable to locate your tracking details, or your order status hasn't updated in 48 hours, reach out to us:

 [support email]

 [phone number]

Note: Orders are typically dispatched within [48 hours] and delivered within [3–7 business days] depending on your location.

Note for developer: This page needs the actual tracking widget/iframe embedded where marked — this is either:

- A **Shiprocket tracking embed** (like the reference page: search by Order ID or AWB), or
- A **redirect/deep-link button** that sends the customer straight to the courier partner's tracking page with their order info pre-filled
